E556

CAC New Model / Previous Model Unit Match

New and previous generation 24,000 Btu/h and 36,000 Btu/h CAC models can be paired but will require a product option code modification to communicate. If the product option code is not modified on a mixed generation system, a mixed capacity error code will be displayed. The indoor unit and outdoor unit match must be of the same nominal capacity.

Product option codes can be modified using the SNET Pro 2 service software, a wired controller, or a wireless controller (IR receiver is required for wireless remote controller use). Please refer to the installation manuals for product option code procedures.

"M" and "K" Model indoor units connected to "B" series outdoor units
