Standard Delivery Schedule

Open Types

0.5 thru 750 AMP

- | | |
|---------------------------------------|-------------------|
| Stock - 2 weeks | (Quantity 1 – 4) |
| 1 - 4 weeks | (Quantity 5 - 20) |
| Consult factory for larger quantities | |

NEMA 1, and 3R enclosed reactors

0.5 thru 750 AMP

- | | |
|---------------|-------------------|
| Special order | (Quantity 1 – 4) |
| Special order | (Quantity 5 - 20) |

Consult factory for delivery dates

Non-Standard product requests

Complete page 37 and Consult factory

Above schedule is based on normal manufacturing conditions. Unforeseen issues in materials or manufacturing backlog may affect above standard delivery schedule. Please contact factory for actual delivery.

RLW Reactors

Technical Reference Manual

Selection & Application Guide

The MTE World reactor (RLW) is an international product that is optimized to support global IEC and NEC Drive /motor applications and provides a low cost line side alternative to the present line of MTE "RL" line/ load reactors. RLW's are RMS current rated impedance devices. Selection is based on the choice of inductance correlated to the application motor full load amps, voltage and frequency and the number of phases. Use the selection table based on input voltage and NEC FLA motor selection table for common voltages. For critical impedance selection based on specific HP or load currents consult MTE applications engineering.

Single phase applications: The RLW like RL reactors may also be sized to protect single phase drives. Please see MTE application **AN0120** for details

Load side applications require use of the reactor output selection tables.

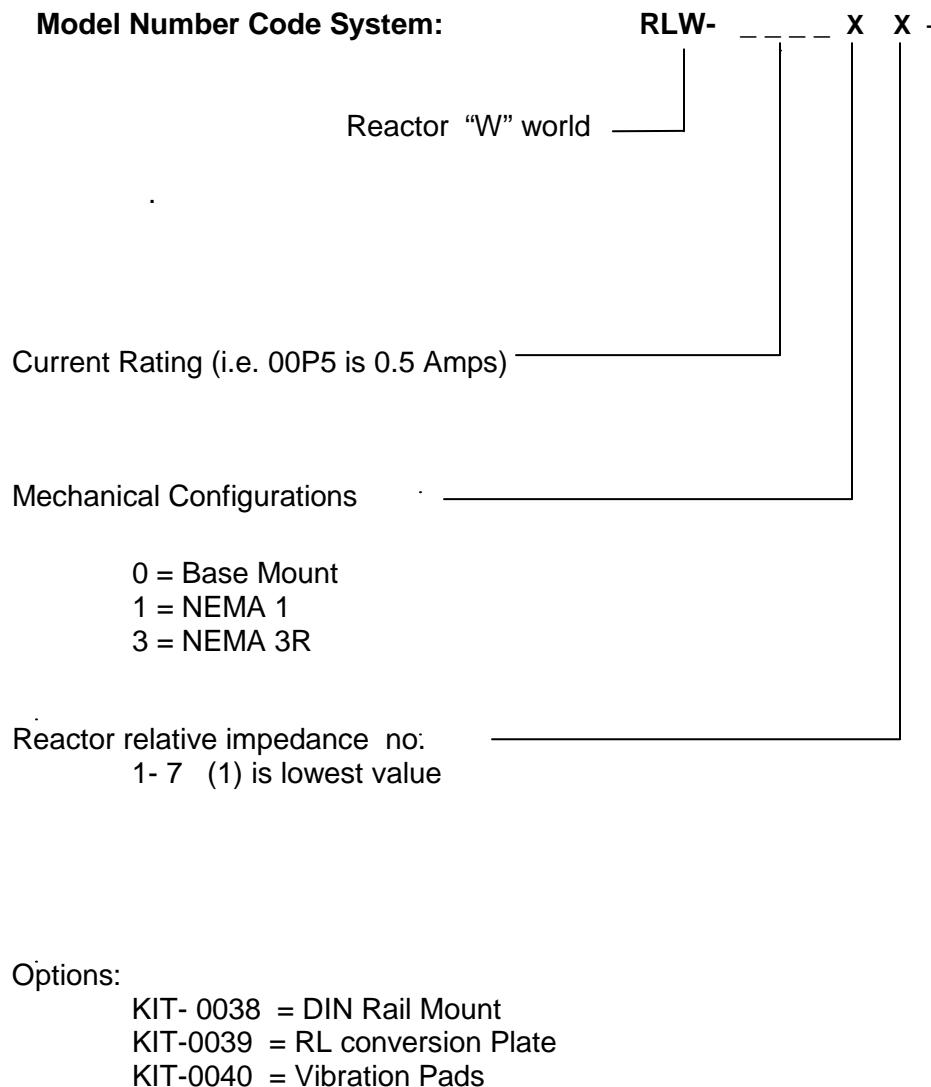

Choose the impedance level:

- 1.5% Minimum impedance for reduction of low level voltage transients. RLW reactors may be used as a supplement to already installed reactors.
- 3% Helps minimize (95%) most drive nuisance tripping and faults caused by over voltage and input line disturbances. 3% is typical impedance specified by most drive manufacturers.
- 5% The MTE recommended value to protect drive components from transient overvoltage, prevents (99.9%) nuisance trips, and offers limited harmonic protection to input line power from drive induced harmonics.

Note:

1. **The RLW was designed to support global IEC and NEC input VFD drive motor applications. To gain optimum performance and size advantages use the RLW selections tables by HP and voltage on the following pages.**
2. **RLW output selection is based on 80% of fundamental RLW current capacity for output load applications up to 100 foot motor leads!**
3. **Cross reference is based on RL reactors used for 480 vac NEC FLA applications**

RLW Reactors

Technical Reference Manual

Factory Configured Option Kits

KIT-0038

DIN rail Mount.

A DIN rail mounting option is provided to utilize standard 35mm panel mounted DIN rail for securing the reactor via two steel mounting clips. The DIN rail kit is only available on snap channel reactors up to 7 amps and indicated by figure 1- 2 on mechanical table.

To incorporate this option into a selected reactor add **KIT-0038** to each selected RLW reactor and add **\$28** DIN clip list price to the list price of the reactor. Clips and hardware are shipped loose.

KIT-0039

RL base mount converter plate.

The base plate adaptor option will allow the RLW to use existing RL bolt hole mounting patterns.

To incorporate this option into a selected reactor add **KIT-0039** to each selected RLW reactor and add **\$38** base mount list price to the list price of the reactor. Base plate hardware is shipped loose.

KIT-0040

Vibration pads for enclosure mounting.

Vibration isolation for enclosed reactors may be fitted with an optional vibration pad to dampen cabinet vibrations from the reactor.

To incorporate this option into a selected reactor add **KIT-0040** to each selected RLW reactor and add **\$51** vibration pads list price to the list price of the reactor. Vibration pads are shipped loose.

Note: The above listed options may affect product lead times consult the factory for scheduled delivery for these options.

Specification Data

Impedance basis	Calculation: % Z= (I/V) x 2πfL√3 x 100
Service Factor:	
Line (continuous):	100%
Load output side	80% de-rated for 100 foot long lead limit
Overload Rating <i>Line side</i>	150% of RMS rating for 1 minute 200% of RMS rating for 10 seconds
Maximum system voltage	690 Volts
Switching frequency	Maximum 20 KHz Minimum 1 KHz
Insulation system	200° C
Temperature rise	140 C (average)
Ambient temperature	Full load: -40 to 50° C Open -40 to 45° C Enclosed -40 to 90° C Storage
Altitude (de-rate above)	1000 meters 3300 feet
Fundamental frequency	50/60 Hz de-rate above 60 Hz
Inductance tolerance	+/- 10%
Inductance curve (typical)	100% at 100% current 80% at 150% current 50% at 200% current
Dielectric Strength	4000 volts RMS (2200 volts peak repetitive)
Max audible level at two meters:	Line applications: 65 dBA Load applications: 76 dBA
Approvals:	Up to 600V:CE,UL-508,Type RL cUL per CSA C22.2 690V: CE. Consult Factory for UL on 690V
<i>Note: Short circuit rating not required under Exception No.1 of UL508A SB4.2.1 effective 4/25/06</i>	
Enclosures:	MTECab-8, 13V, 17V have NEMA1 Cab 12C and up are NEMA1 rated as NEMA 2 (Indoor rating with rippling water protection) MTE NEMA 3R is a type 3R outdoor rating
DIN Rail Mount:	2 spring steel screw mounts for 35mm rail With 10-32 screws

Non Standard Product Request

1. % Impedance _____.
2. Application: Line / load / other: _____.
3. HP or FLA rating _____.
4. Fundamental frequency _____.
5. Harmonic content of load current _____.
6. Overload current and duration _____.
7. Special Reactor tolerance _____.
8. Special Enclosure request _____.
9. Special product approvals _____.
10. Reduced sound level @ two meters _____.

Number of units requested _____

Target date for product delivery _____.

RLW Reactors

Technical Reference Manual

ISO 7.2.3		RLW AC Line / Load Reactors	RLW-TRM-E
Responsibility:	MTE Corporate		
Approved by:	DB Read		
File Location:	P:\Public\Controlled Documents\Sales\TECHNICAL REFERENCE		
Revision	Date	Revision History	
---	5/29/09	New document written by Wayne Walcott –	
002	8/4/09	WRW Added RL to HP selection pages	
003	8/13/09	WRW remove RL hp from selection table added RLW load selection tables	
004	8/31/09	WRW added phase 2 reactors	
005	9/08/09	Fixed output selection and prices to 250 amp	
006	9/18/09	WRW added Updates for phase 2 & 3	
007	10/7/09	WRW revised label current to match part number amps on data tables	
008	8/1/10	CAB renamed PB-1101 to RLW-TRM, added updates for phase 4, revised CAB drawings	
009	12/1/10	CAB Added Hyperlinks	
010	3/30/11	Fixed Typo in page 17, changed 408 to 480 added de-rating curves	
011	5/10/12	Updated Logo.
